

Operation Process Tips

Step 1:

View the group observation area (top left panel) and note the perceived element groups.

Step 2:

Select all elements in the interactive area that you perceive can form a group.

- When elements are dense, it is recommended to use  crop selection or  path selection to select elements in batches.
- Elements that are already selected will be deselected if selected again.
- In non-path/crop mode, the mouse wheel can zoom and drag the interactive chart.

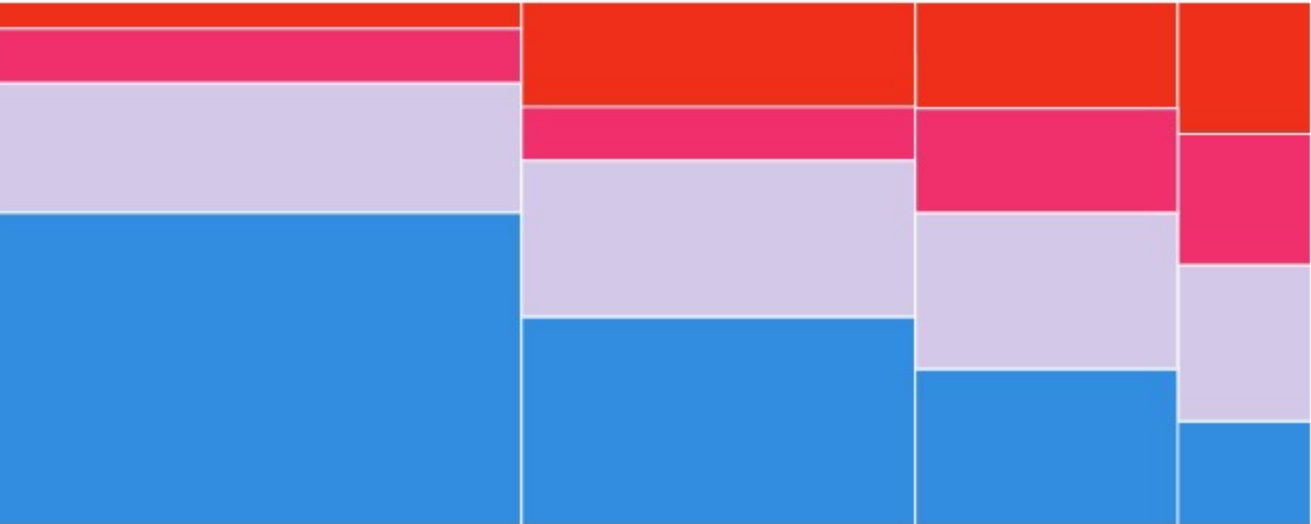

Step 3:

After selecting a group, if there are other groups to add, click the plus button in the group panel to create a new group.

Step 4:

Don't forget to rate the group after selecting the elements~
